Syntillica Project Management

Cloud-Based

Syntillica has implemented a custom-designed, cloud-based project management server to enable expert consultants and clients from around the world to work together on projects, via any internet-networked device and available 24/7.

Secure

The Syntillica Project Management Server is hosted on a Virtual Private Server using the secure https web protocol. Each user (consultants and client) are granted their own access credentials for each project separately at designated permission levels.

Collaborative

Everything needed to collaborate on a successful project in one portal: Activity Reports, Work Packages, Gantt Charts, Budgets, Time-Tracking, Automated Notifications, News Feeds, Document Exchange, Meetings, Calendars, User Guides and more.
